INFORMED CONSENT FOR TELEPSYCHOLOGY

This Informed Consent for Telepsychology contains important information focusing on doing psychotherapy using the phone or the Internet. Please read this carefully, and let me know if you have any questions. When you sign this document, it will represent an agreement between us.

Benefits and Risks of Telepsychology

Telepsychology refers to providing psychotherapy services remotely using telecommunications technologies, such as video conferencing or telephone. One of the benefits of telepsychology is that the client and clinician can engage in services without being in the same physical location. This can be helpful in ensuring continuity of care if the client or clinician moves to a different location, takes an extended vacation, or is otherwise unable to continue to meet in person. It is also more convenient and takes less time. Telepsychology, however, requires technical competence on both our parts to be helpful. Although there are benefits of telepsychology, there are some differences between in-person psychotherapy and telepsychology, as well as some risks. For example:

Risks to confidentiality. Because telepsychology sessions take place outside of the therapist's private office, there is potential for other people to overhear sessions if you are not in a private place during the session. On my end I will take reasonable steps to ensure your privacy. But it is important for you to make sure you find a private place for our session where you will not be interrupted. It is also important for you to protect the privacy of our session on your cell phone or other device. You should participate in therapy only while in a room or area where other people are not present and cannot overhear the conversation.

Issues related to technology. There are many ways that technology issues might impact telepsychology. For example, technology may stop working during a session, other people might be able to get access to our private conversation, or stored data could be accessed by unauthorized people or companies.

Crisis management and intervention. Usually, I will not engage in telepsychology with clients who are currently in a crisis situation requiring high levels of support and intervention. Before engaging in telepsychology, we will develop an emergency response plan to address potential crisis situations that may arise during the course of our telepsychology work.

Efficacy. Most research shows that telepsychology is about as effective as in-person psychotherapy. However, some therapists believe that something is lost by not being in the same room. For example, there is debate about a therapist's ability to fully understand nonverbal information when working remotely.

Electronic Communications

We will decide together which kind of telepsychology service to use. You may have to have certain computer or cell phone systems to use telepsychology services. You are solely responsible for any cost to you to obtain any necessary equipment, accessories, or software to take part in telepsychology.

For communication between sessions, I only use email communication and text messaging with your permission and only for administrative purposes unless we have made another agreement. This means that email exchanges and text messages with my office should be limited to administrative matters. This includes things like setting and changing appointments, billing matters, and other related issues. You should be aware that I cannot guarantee the confidentiality of any information communicated by email or text. Therefore, I will not discuss any clinical information by email or text and prefer that you do not either. Also, I do not regularly check email or texts, nor do I respond immediately, so these methods **should not** be used if there is an emergency.

Treatment is most effective when clinical discussions occur at our regularly scheduled sessions. But if an urgent issue arises, you should feel free to attempt to reach me by phone. I will try to return your call as soon as possible except on weekends and holidays. If you are unable to reach me and feel that you cannot wait for me to return your call, contact your family physician or the nearest emergency room and ask for the psychologist or psychiatrist on call. If I will be unavailable for an extended time, I will provide you with the name of a colleague to contact in my absence if necessary.

Confidentiality

I have a legal and ethical responsibility to make my best efforts to protect all communications that are a part of our telepsychology. However, the nature of electronic communications technologies is such that I cannot guarantee that our communications will be kept confidential or that other people may not gain access to our communications. I will try to use updated encryption methods, firewalls, and back-up systems to help keep your information private, but there is a risk that our electronic communications may be compromised, unsecured, or accessed by others. You should also take reasonable steps to ensure the security of our communications (for example, only using secure networks for telepsychology sessions and having passwords to protect the device you use for telepsychology).

The extent of confidentiality and the exceptions to confidentiality that I outlined in my Informed Consent Document still apply in telepsychology. Please let me know if you have any questions about exceptions to confidentiality.

Appropriateness of Telepsychology

From time to time, we may schedule in-person sessions to “check-in” with one another. I will let you know if I decide that telepsychology is no longer the most appropriate form of treatment for you. We will discuss options of engaging in in-person counseling or referrals to another professional in your location who can provide appropriate services.

Testing and Assessment

There is a growing body of research suggesting that certain neuropsychological assessment procedures can be administered with similar outcomes to in-person assessment. If you are seeking assessment, your provider will likely schedule an initial telehealth session with you to determine if telehealth would be appropriate as well as to decide which portions of the assessment can be administered via telehealth (e.g., interviews, exams, testing, consultation, feedback, etc.). The results of telehealth testing procedures
